

# DevOps Maturity Assessment

Score your organization across five capability areas. Aim for Level 3 on every row before optimizing further.

## Culture & Ownership

- L1 Silos between dev and ops
- L2 Shared on-call for some services
- L3 Product teams own build, run, and support
- L4 Blameless post-mortems drive systemic change
- L5 Continuous improvement is measured and rewarded

## Delivery Pipeline

- L1 Manual deploys, long release windows
- L2 CI runs on every commit
- L3 CD to non-prod on every commit
- L4 CD to production behind feature flags
- L5 Progressive delivery with automated rollback

## Infrastructure & Environments

- L1 Hand-crafted environments
- L2 Some scripting
- L3 Environments provisioned via IaC
- L4 Ephemeral preview environments per PR
- L5 Immutable, reproducible from empty account

## Observability & SRE

- L1 Only up/down checks
- L2 Central log aggregation
- L3 SLOs defined and tracked
- L4 Error budgets influence release cadence
- L5 Auto-remediation for common failures

## Security

- L1 Security reviewed at the end
- L2 SAST in CI
- L3 SAST + SCA + secrets scanning gate merges
- L4 IaC scanning + runtime detection

## ■ L5 Continuous compliance and shift-left threat modeling
